Macro AI Hiring Report - American Axle & Manufacturing

AI capabilities identified from investment signals

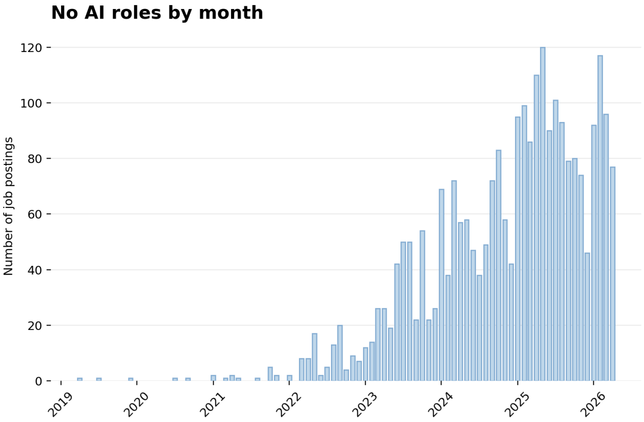
Dataset facts: 2,629 observed postings, 5 AI-core postings, and 9 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

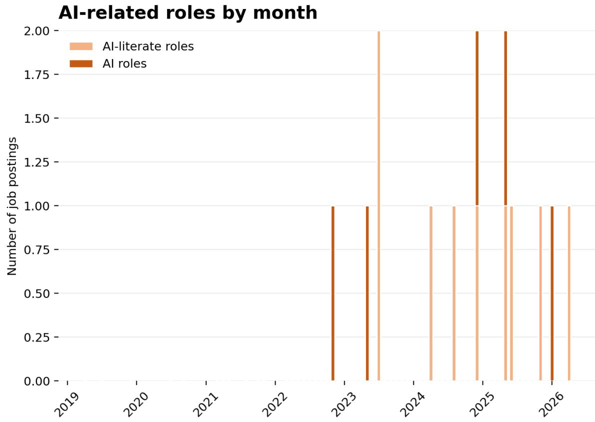
Enterprise AI Infrastructure and Governance
The company is building MLOps and LLMOps platforms to support manufacturing, supply chain, and corporate functions. This investment focuses on establishing a strategic AI roadmap, Responsible AI governance, and AI-focused security practices. The objective is to deliver scalable, secure, and ethical AI solutions across the organization.

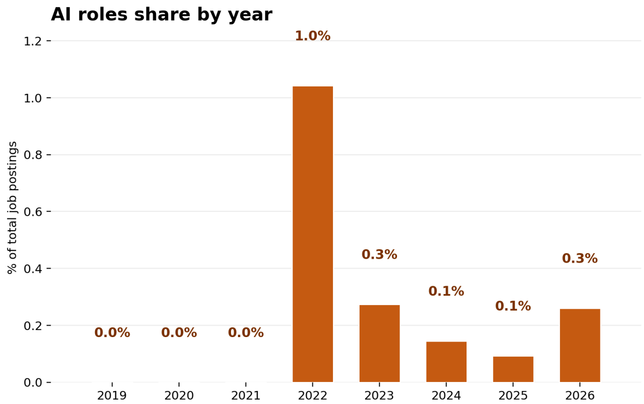
Advanced Predictive Analytics and Business Intelligence
Investment is directed toward developing high-quality prediction systems and data science capabilities using machine learning algorithms such as SVM, Decision Forests, and Neural Networks. These tools are integrated with cloud and data environments including Python, Snowflake, AWS, and Azure. The objective is to provide actionable insights, streamline enterprise business processes, and support digital analytics through advanced statistical analysis.

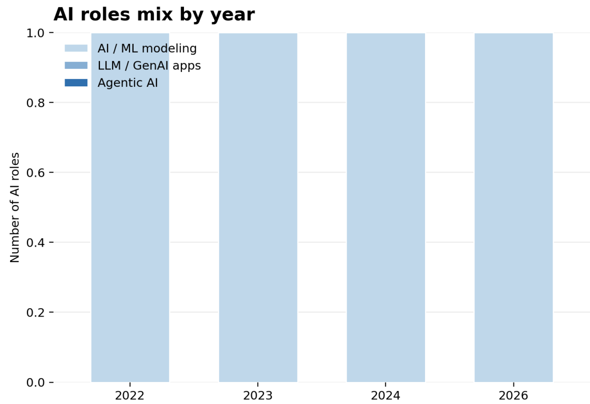
Manufacturing Operations Optimization
The company is applying machine learning models and statistical methods, including XGBoost, NLP, and time series analysis, specifically to manufacturing operations. This capability is being used to enhance business processes with the direct objective of improving product quality and reducing operational costs.

AI hiring trend





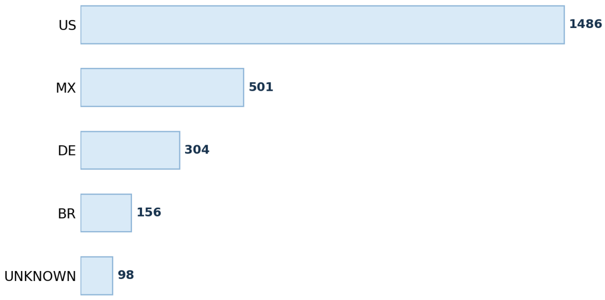




The dataset contains 2629 observed postings. AI-core postings are 5; AI-adjacent postings are 9. Years with AI-related evidence: 2022: AI-core 1/96 (1.0%), AI-adjacent 0/96; 2023: AI-core 1/366 (0.3%), AI-adjacent 2/366; 2024: AI-core 1/687 (0.1%), AI-adjacent 3/687; 2025: AI-core 1/1077 (0.1%), AI-adjacent 3/1077; 2026: AI-core 1/384 (0.3%), AI-adjacent 1/384. AI-core capability mix by year: 2022: AI / ML modeling 1; 2023: AI / ML modeling 1; 2024: AI / ML modeling 1; 2026: AI / ML modeling 1. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

AI hiring geography

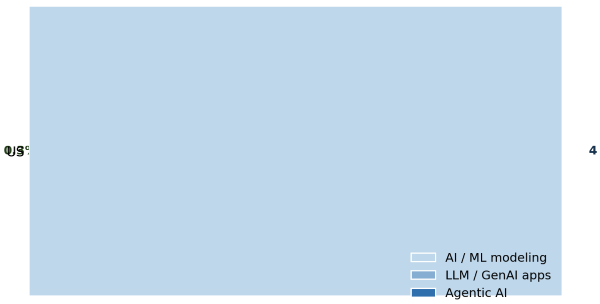
Top hiring countries



Top countries for AI roles

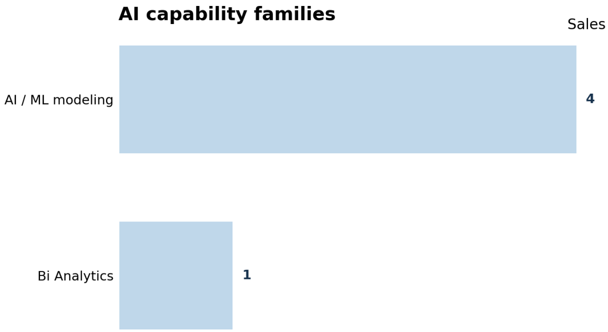
AI intensity by country

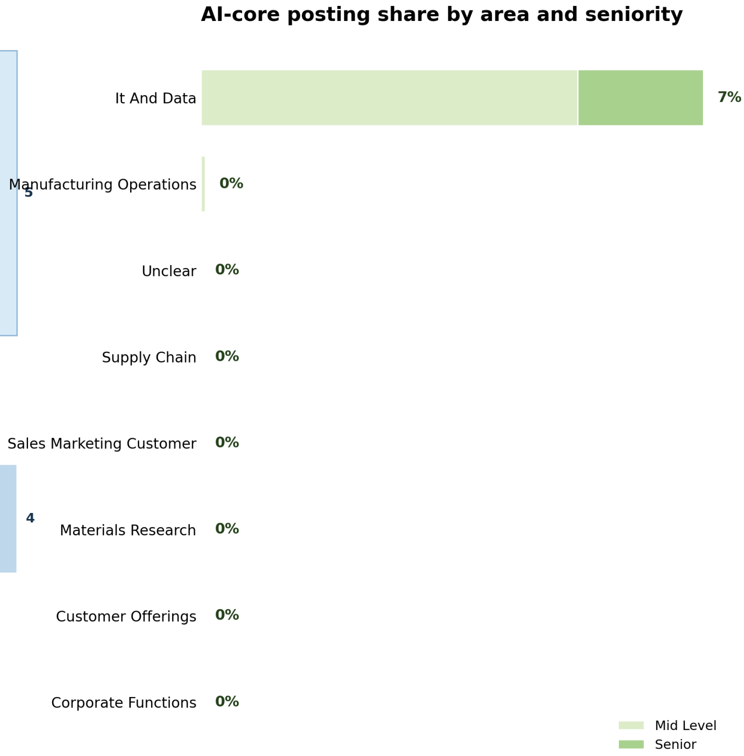
AI role mix in top AI countries



Largest overall posting countries: US 1486; MX 501; DE 304; BR 156; UNKNOWN 98; GB 20. Countries with AI-core postings and their denominators: US: 5/1486 (0.34%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

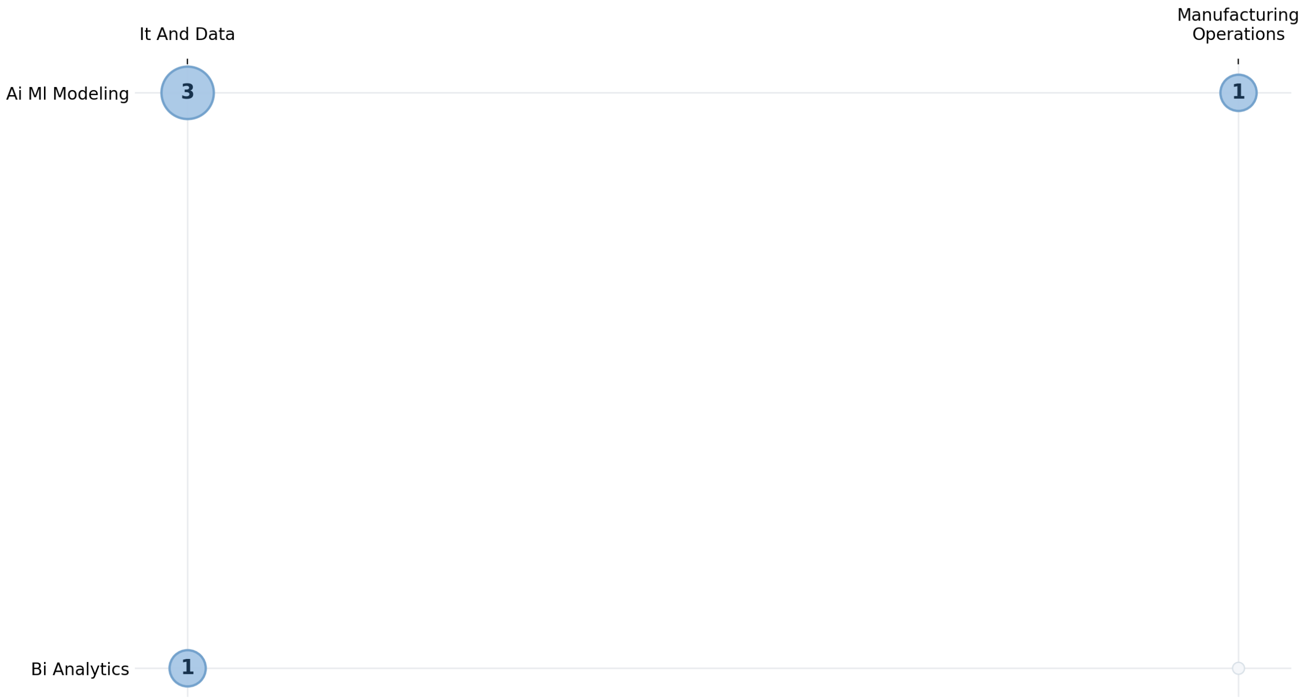
AI staffing and seniority





This page replaces skill lists with higher-level staffing information. Role archetypes: AI-related profile: 5. AI capability families: AI / ML modeling: 4; Bi Analytics: 1. Business-area denominators: It And Data 4/55 (7.27%); Manufacturing Operations 1/1665 (0.06%). Seniority counts inside AI-core postings: Mid Level 4, Senior 1. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets



The matrix locates AI-core postings by capability family and business area. Capability-family counts: Ai Ml Modeling 4; Bi Analytics 1. Business-area counts: It And Data 4; Manufacturing Operations 1. Nonzero cells: Ai Ml Modeling in It And Data: 3; Ai Ml Modeling in Manufacturing Operations: 1; Bi Analytics in It And Data: 1. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
