Macro AI Hiring Report - Trelleborg

AI capabilities identified from investment signals

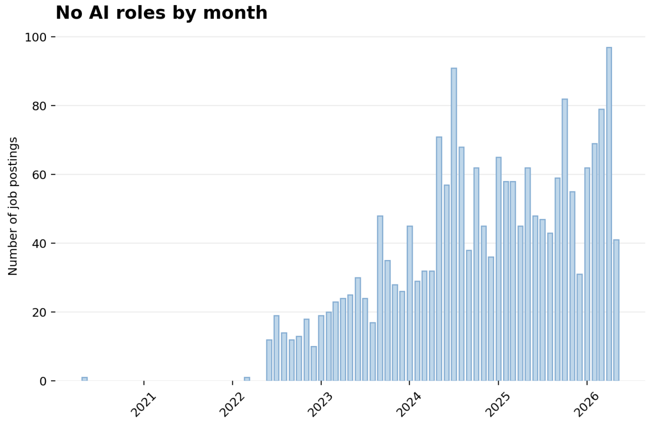
Dataset facts: 2,048 observed postings, 5 AI-core postings, and 17 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

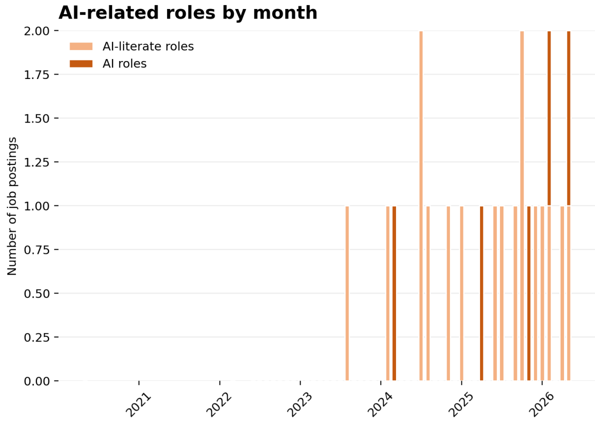
Enterprise AI Strategy and Platform Infrastructure. The company is establishing an enterprise-wide AI strategy and governance framework supported by the development of AI models and PaaS solutions. These capabilities, which include advanced machine learning and Generative AI, are applied to cross-functional business challenges across manufacturing, operations, and sales. The objective is to identify AI opportunities that drive optimized decision-making, accelerate digital transformation, and enable intelligent automation.

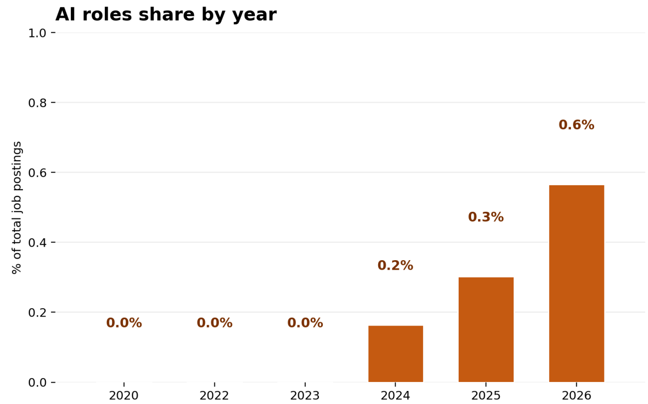
Computer Vision for Manufacturing Operations. Investment is directed toward machine learning and computer vision technologies for manufacturing traceability and quality control. This capability is applied to automate part counting and optimize production processes to improve operational efficiency on the factory floor.

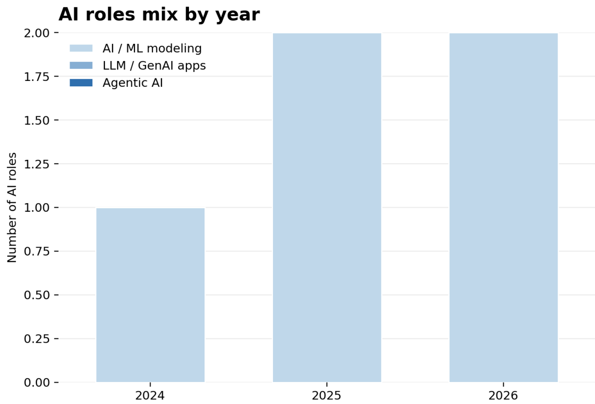
Anomaly Detection for Product Development. The company is deploying machine learning and unsupervised anomaly detection specifically for seal life cycle testing. This application is used to identify irregularities during the testing phase to accelerate the product development cycle and improve final product quality.

AI hiring trend





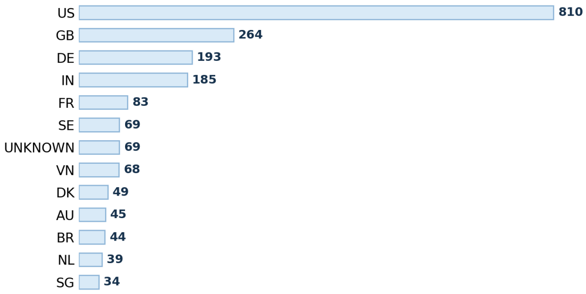




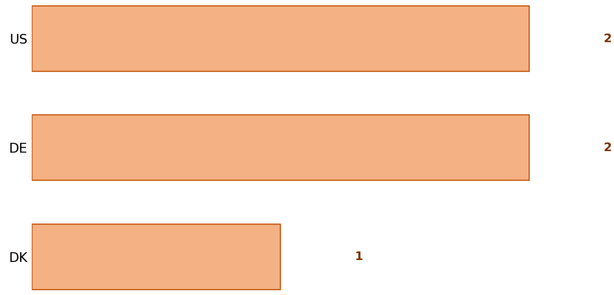
The dataset contains 2048 observed postings. AI-core postings are 5; AI-adjacent postings are 17. Years with AI-related evidence: 2023: AI-core 0/320 (0.0%), AI-adjacent 1/320; 2024: AI-core 1/612 (0.2%), AI-adjacent 5/612; 2025: AI-core 2/662 (0.3%), AI-adjacent 7/662; 2026: AI-core 2/354 (0.6%), AI-adjacent 4/354. AI-core capability mix by year: 2024: AI / ML modeling 1; 2025: AI / ML modeling 2; 2026: AI / ML modeling 2. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

AI hiring geography

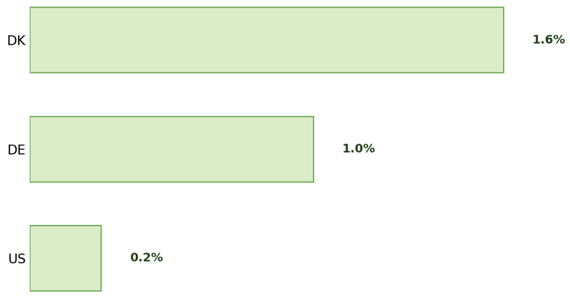
Top hiring countries



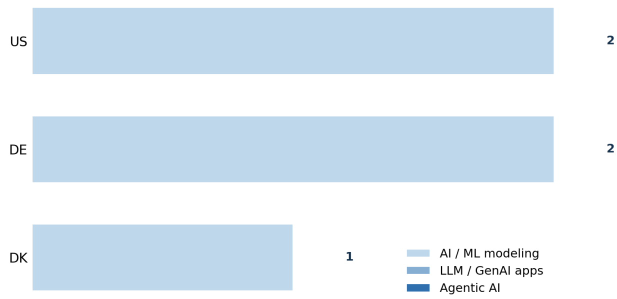
Top countries for AI roles



AI intensity by country



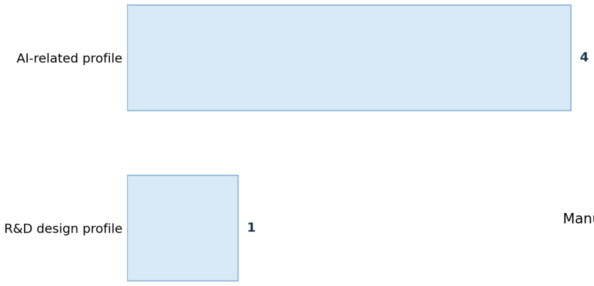
AI role mix in top AI countries



Largest overall posting countries: US 810; GB 264; DE 193; IN 185; FR 83; UNKNOWN 69. Countries with AI-core postings and their denominators: US: 2/810 (0.25%); DE: 2/193 (1.04%); DK: 1/49 (2.04%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

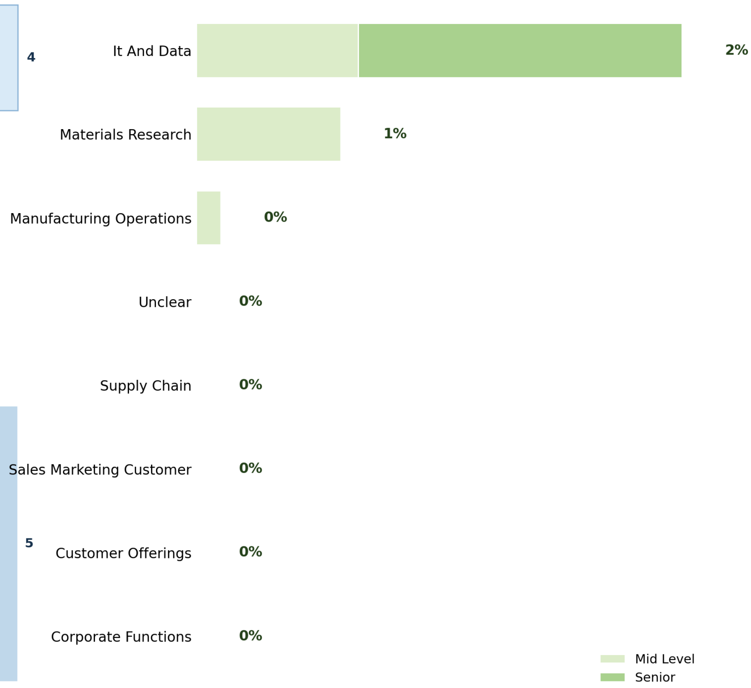
AI staffing and seniority

AI role archetypes



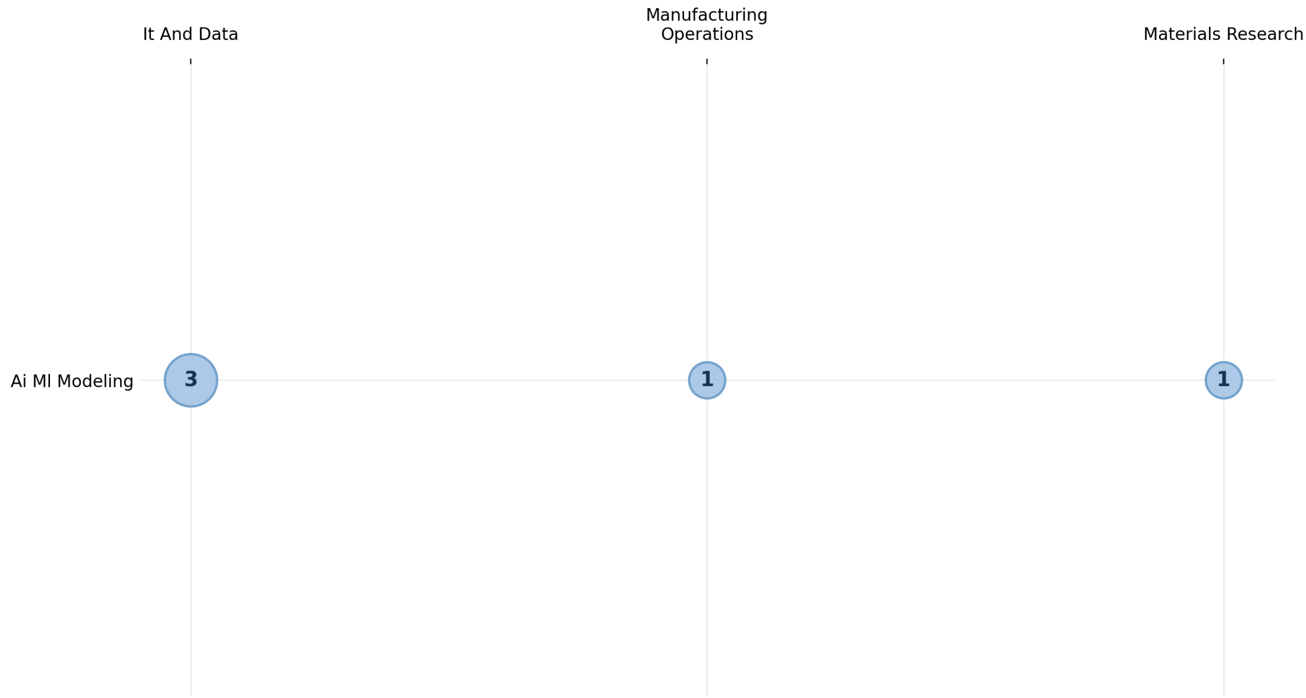
AI capability families

AI-core posting share by area and seniority



This page replaces skill lists with higher-level staffing information. Role archetypes: AI-related profile: 4; R&D design profile: 1. AI capability families: AI / ML modeling: 5. Business-area denominators: It And Data 3/132 (2.27%); Manufacturing Operations 1/869 (0.12%); Materials Research 1/148 (0.68%). Seniority counts inside AI-core postings: Mid Level 3, Senior 2. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets



The matrix locates AI-core postings by capability family and business area. Capability-family counts: Ai Ml Modeling 5. Business-area counts: It And Data 3; Manufacturing Operations 1; Materials Research 1. Nonzero cells: Ai Ml Modeling in It And Data: 3; Ai Ml Modeling in Manufacturing Operations: 1; Ai Ml Modeling in Materials Research: 1. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
