Macro AI Hiring Report - Bridgestone

AI capabilities identified from investment signals

Dataset facts: 4,237 observed postings, 16 AI-core postings, and 76 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

Digital Material Design and Engineering Value Chain
The company is investing in data-driven models, machine learning, and material informatics to transform the engineering value chain. These capabilities are applied to polymer and compound development and Product Lifecycle Management (PLM) within the 3DX platform. The objective is to establish a digital-first material design workflow, facilitate material development, and inform business decisions through digital transformation in product development.

IoT Analytics and Predictive Product Solutions
Investment is directed toward machine learning, signal processing, and data mining architectures for IoT and business data. These technologies are used to develop predictive tire health technologies and integrate high-quality prediction systems into digital products. This work aims to solve customer pain-points, drive product strategy, and inform strategic decision-making through advanced tire-centric solutions.

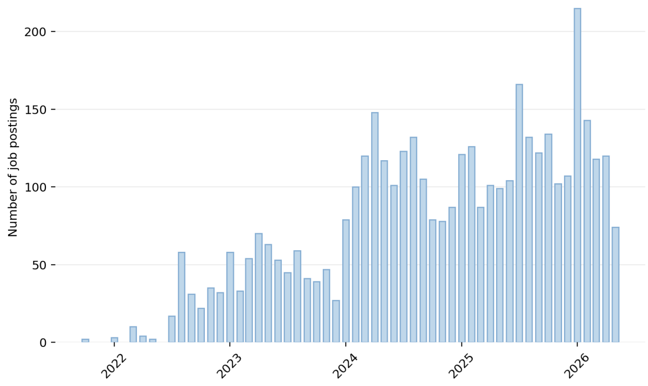
Market Demand Forecasting and Commercial Planning
The company is building predictive modeling and machine learning capabilities for market demand forecasting. This application is designed to optimize commercial planning and enhance strategic decision-making processes.

Fraud Risk Strategy and Consumer Lending Analytics
Investment in machine learning tools and predictive modeling is focused on fraud strategy and analytics within credit card and consumer lending sectors. These systems are intended to minimize financial losses, enhance customer authentication, and improve the overall customer experience.

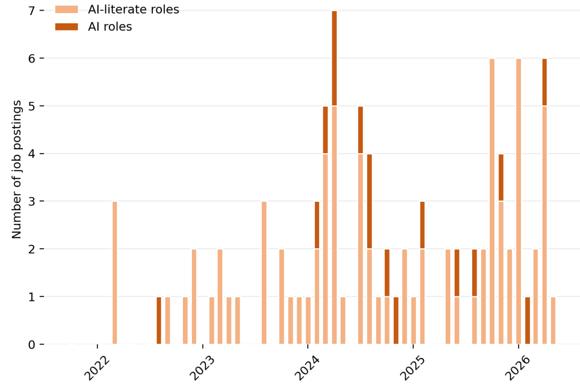
Enterprise Generative AI and Digital Transformation
The company is developing AI strategy and Generative AI capabilities to support enterprise-wide digital transformation. This investment serves the dual objective of driving cost reduction and generating new revenue streams.

AI hiring trend

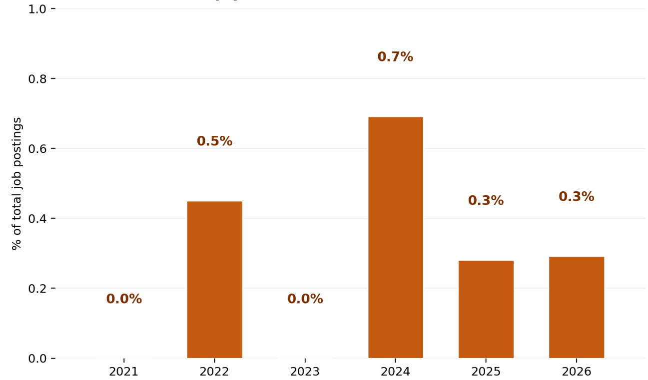
No AI roles by month



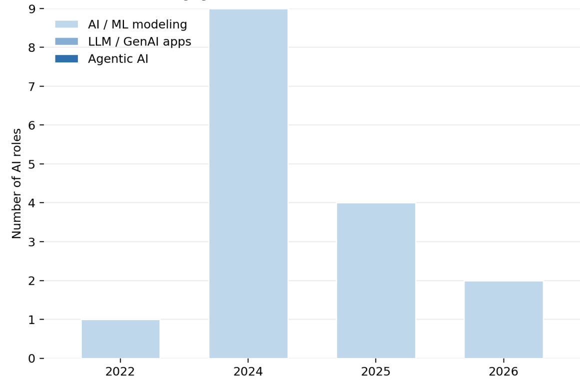
AI-related roles by month



AI roles share by year

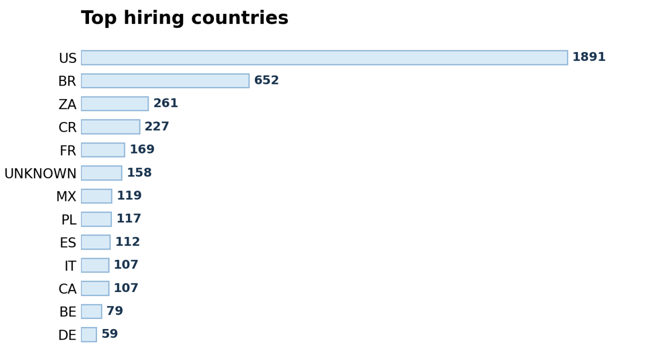


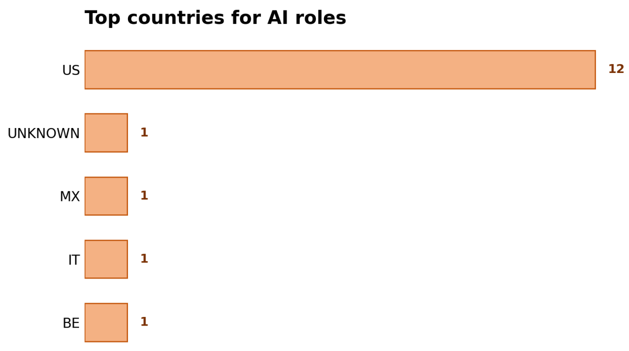
AI roles mix by year

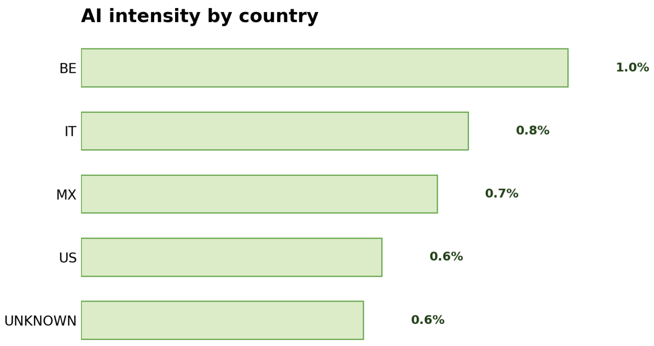


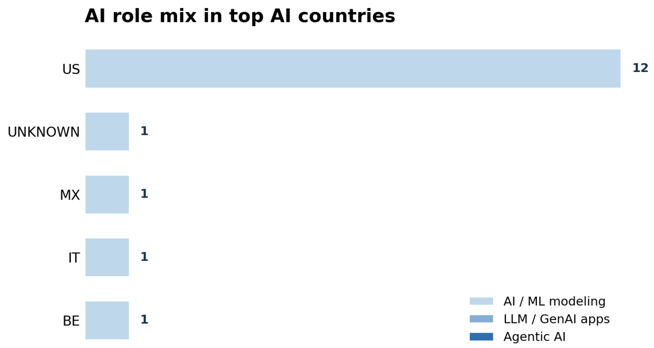
The dataset contains 4237 observed postings. AI-core postings are 16; AI-adjacent postings are 76. Years with AI-related evidence: 2022: AI-core 1/222 (0.5%), AI-adjacent 7/222; 2023: AI-core 0/601 (0.0%), AI-adjacent 12/601; 2024: AI-core 9/1301 (0.7%), AI-adjacent 23/1301; 2025: AI-core 4/1425 (0.3%), AI-adjacent 20/1425; 2026: AI-core 2/686 (0.3%), AI-adjacent 14/686. AI-core capability mix by year: 2022: AI / ML modeling 1; 2024: AI / ML modeling 9; 2025: AI / ML modeling 4; 2026: AI / ML modeling 2. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

AI hiring geography



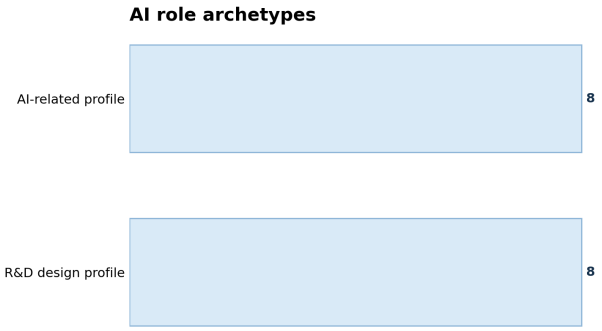


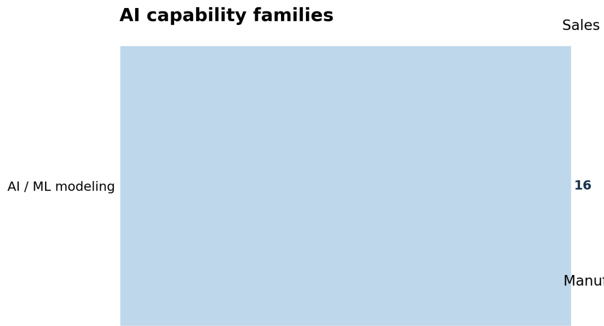


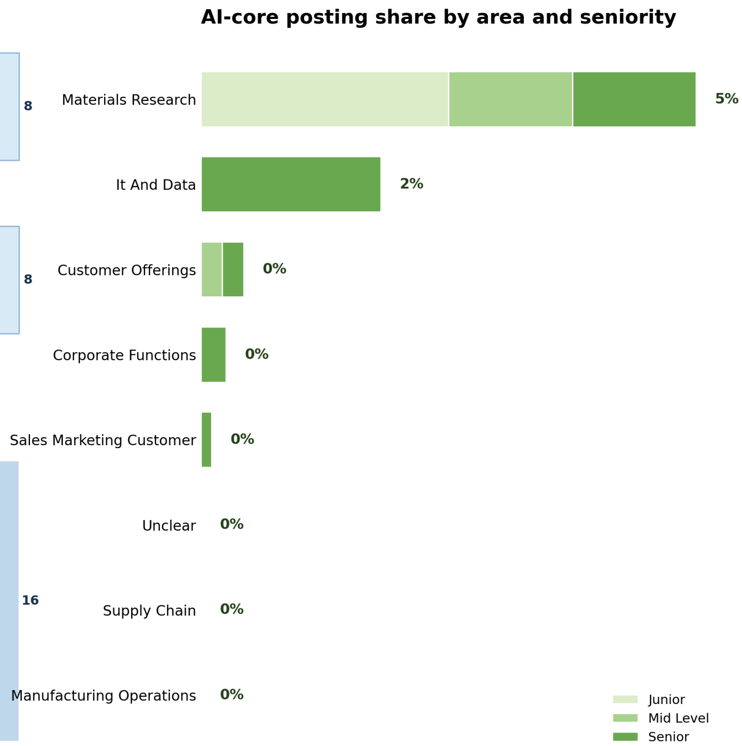


Largest overall posting countries: US 1891; BR 652; ZA 261; CR 227; FR 169; UNKNOWN 158. Countries with AI-core postings and their denominators: US: 12/1891 (0.63%); UNKNOWN: 1/158 (0.63%); MX: 1/119 (0.84%); IT: 1/107 (0.93%); BE: 1/79 (1.27%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

AI staffing and seniority







This page replaces skill lists with higher-level staffing information. Role archetypes: R&D design profile: 8; AI-related profile: 8. AI capability families: AI / ML modeling: 16. Business-area denominators: Materials Research 8/152 (5.26%); It And Data 3/157 (1.91%); Customer Offerings 2/441 (0.45%); Corporate Functions 2/752 (0.27%); Sales Marketing Customer 1/868 (0.12%). Seniority counts inside AI-core postings: Senior 9, Junior 4, Mid Level 3. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets

The matrix locates AI-core postings by capability family and business area. Capability-family counts: Ai Ml Modeling 16. Business-area counts: Materials Research 8; It And Data 3; Customer Offerings 2; Corporate Functions 2; Sales Marketing Customer 1. Nonzero cells: Ai Ml Modeling in Materials Research: 8; Ai Ml Modeling in It And Data: 3; Ai Ml Modeling in Corporate Functions: 2; Ai Ml Modeling in Customer Offerings: 2; Ai Ml Modeling in Sales Marketing Customer: 1. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
