Macro AI Hiring Report - Gates Corporation

AI capabilities identified from investment signals

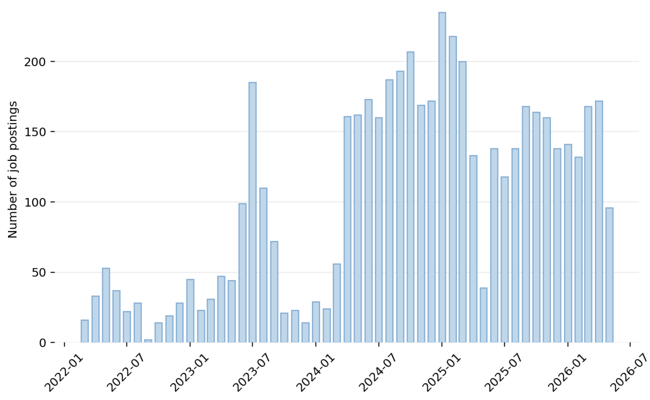
Dataset facts: 5,250 observed postings, 3 AI-core postings, and 30 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

Product Engineering and Design Optimization. The company is investing in AI/ML modeling and simulation capabilities to transform product development and engineering workflows. These technologies are applied to optimize materials, improve design efficiency, and predict product performance, with the objective of accelerating innovation and enhancing the precision of the design process.

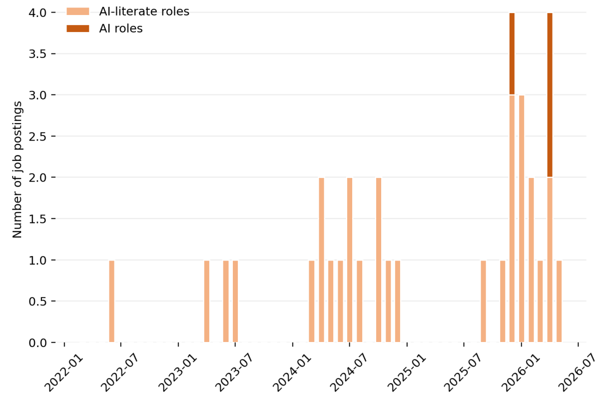
Enterprise AI and Quantitative Modeling. Investment is directed toward the deployment of AI and ML solutions, specifically Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) architectures, for enterprise-wide adoption. These capabilities are used to address critical business challenges and enhance quantitative models, serving to improve decision-making and operational problem-solving across the organization.

AI hiring trend

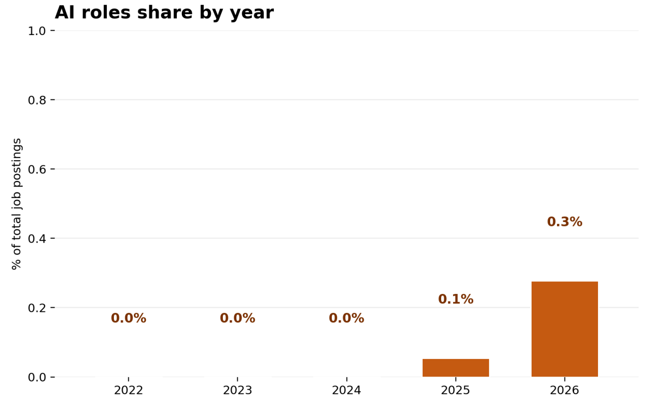
No AI roles by month



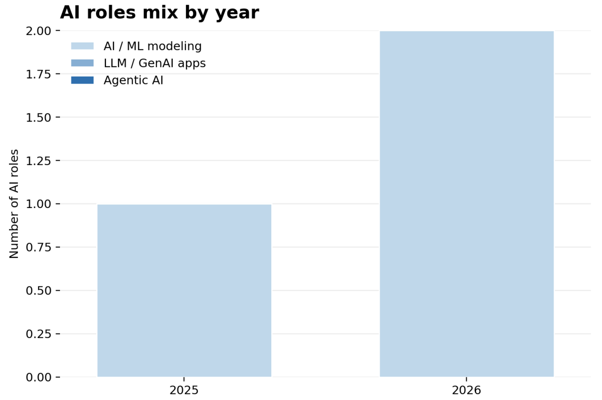
AI-related roles by month



AI roles share by year

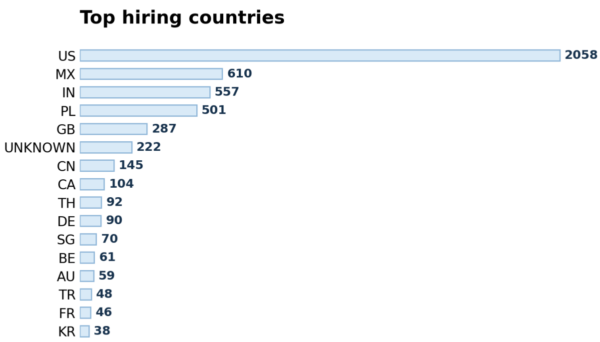


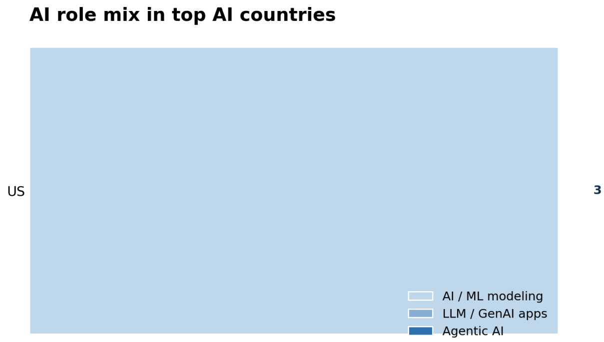
AI roles mix by year



The dataset contains 5250 observed postings. AI-core postings are 3; AI-adjacent postings are 30. Years with AI-related evidence: 2022: AI-core 0/253 (0.0%), AI-adjacent 1/253; 2023: AI-core 0/717 (0.0%), AI-adjacent 3/717; 2024: AI-core 0/1705 (0.0%), AI-adjacent 12/1705; 2025: AI-core 1/1855 (0.1%), AI-adjacent 5/1855; 2026: AI-core 2/720 (0.3%), AI-adjacent 9/720. AI-core capability mix by year: 2025: AI / ML modeling 1; 2026: AI / ML modeling 2. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

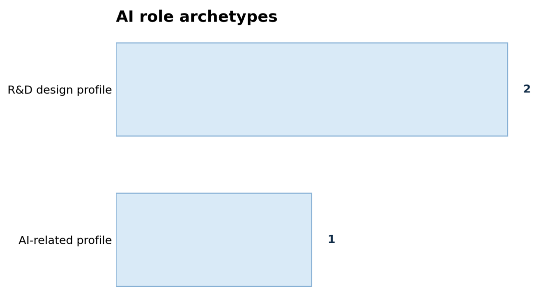
AI hiring geography

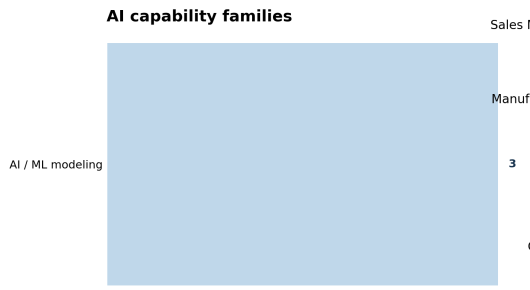


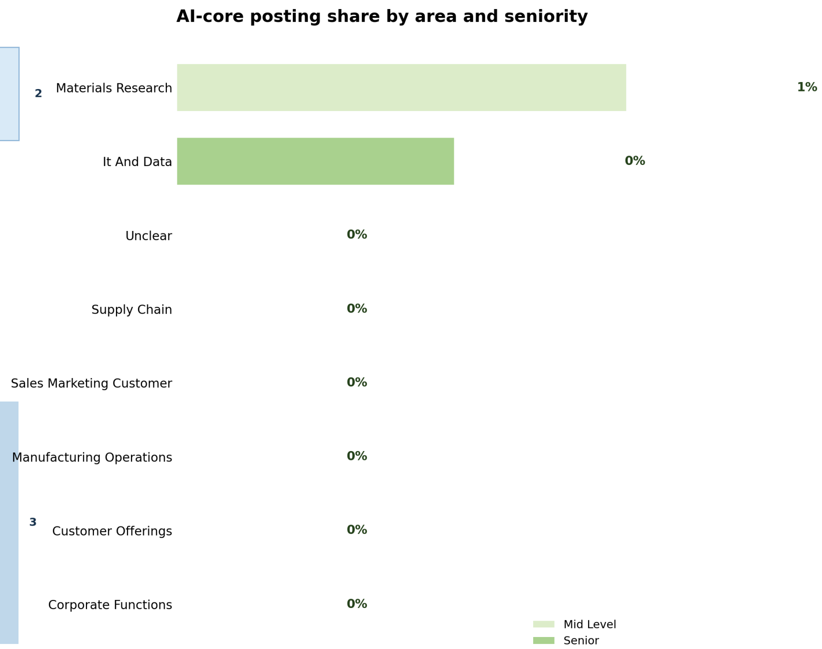


Largest overall posting countries: US 2058; MX 610; IN 557; PL 501; GB 287; UNKNOWN 222. Countries with AI-core postings and their denominators: US: 3/2058 (0.15%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

AI staffing and seniority

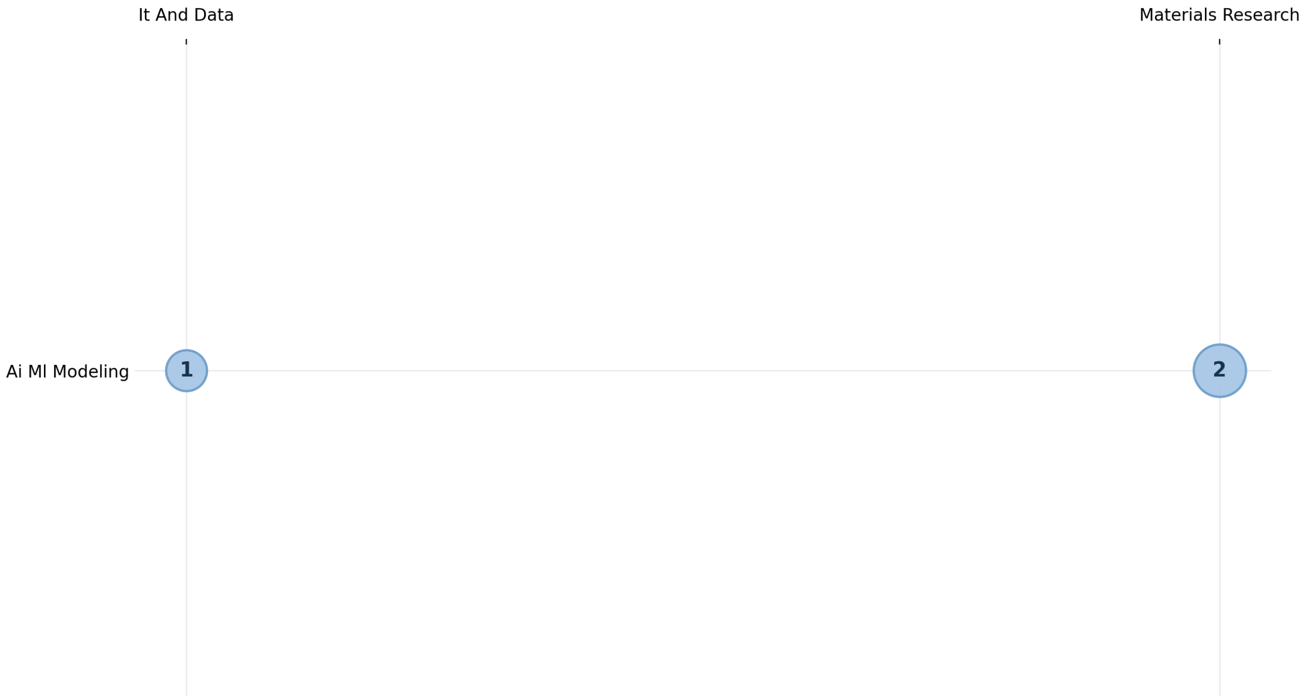






This page replaces skill lists with higher-level staffing information. Role archetypes: R&D design profile: 2; AI-related profile: 1. AI capability families: AI / ML modeling: 3. Business-area denominators: Materials Research 2/378 (0.53%); It And Data 1/306 (0.33%). Seniority counts inside AI-core postings: Mid Level 2, Senior 1. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets



The matrix locates AI-core postings by capability family and business area. Capability-family counts: Ai Ml Modeling 3. Business-area counts: Materials Research 2; It And Data 1. Nonzero cells: Ai Ml Modeling in Materials Research: 2; Ai Ml Modeling in It And Data: 1. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
