

Macro AI Hiring Report - Dana

AI capabilities identified from investment signals

Dataset facts: 7,708 observed postings, 7 AI-core postings, and 23 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

Enterprise AI Enablement and Productivity. The company is investing in Microsoft Copilot and the development of AI agents to facilitate enterprise-wide adoption. This initiative focuses on user enablement to drive organizational productivity and streamline internal workflows.

Supply Chain Optimization and Predictive Modeling. Investment is directed toward AI-driven forecasting and predictive modeling within supply chain operations. These capabilities are applied to optimize inventory, material flow, and forecast accuracy with the objective of detecting supply risks and reducing working capital.

Domain-Specific Data Platforms and Decision Support. The company is building enterprise data platforms and GenAI capabilities tailored for aftermarket, commercial, and engineering domains. These investments aim to improve operational performance, enhance decision-making, and extract business value from product data to improve the customer experience.

Engineering Simulation and Drivetrain Analysis. Investment in AI/ML techniques is being applied to advanced simulation and NVH (Noise, Vibration, and Harshness) vibroacoustic analysis. This capability is used specifically for drivetrain attribute analysis to improve efficiency during the design and development phases.

AI hiring trend

The dataset contains 7708 observed postings. AI-core postings are 7; AI-adjacent postings are 23. Years with AI-related evidence: 2023: AI-core 1/1758 (0.1%), AI-adjacent 5/1758; 2024: AI-core 1/3396 (0.0%), AI-adjacent 4/3396; 2025: AI-core 0/1958 (0.0%), AI-adjacent 10/1958; 2026: AI-core 5/551 (0.9%), AI-adjacent 4/551. AI-core capability mix by year: 2023: AI / ML modeling 1; 2026: AI / ML modeling 2, LLM / GenAI apps 2. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

AI hiring geography

Top hiring countries

Top countries for AI roles

AI intensity by country

AI role mix in top AI countries

Largest overall posting countries: US 2623; MX 2239; IT 727; CA 649; IN 422; DE 333. Countries with AI-core postings and their denominators: US: 6/2623 (0.23%); MX: 1/2239 (0.04%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

AI staffing and seniority

This page replaces skill lists with higher-level staffing information. Role archetypes: AI-related profile: 4; AI architecture / enterprise AI: 2; R&D design profile: 1. AI capability families: AI / ML modeling: 3; LLM / GenAI apps: 2; Data Engineering: 1; Materials Science Rd: 1. Business-area denominators: It And Data 3/127 (2.36%); Supply Chain 2/875 (0.23%); Materials Research 1/929 (0.11%); Customer Offerings 1/431 (0.23%). Seniority counts inside AI-core postings: Senior 4, Mid Level 3. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets

The matrix locates AI-core postings by capability family and business area. Capability-family counts: Ai MI Modeling 3; Llm Genai Applications 2; Data Engineering 1; Materials Science Rd 1. Business-area counts: It And Data 3; Supply Chain 2; Materials Research 1; Customer Offerings 1. Nonzero cells: Llm Genai Applications in It And Data: 2; Ai MI Modeling in Customer Offerings: 1; Ai MI Modeling in It And Data: 1; Ai MI Modeling in Supply Chain: 1; Data Engineering in Supply Chain: 1; Materials Science Rd in Materials Research: 1. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
