

Macro AI Hiring Report - Goodyear

AI capabilities identified from investment signals

Dataset facts: 16,988 observed postings, 97 AI-core postings, and 292 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

Tire Intelligence and Mobility Solutions

The company is investing in advanced digital signal processing, sensor fusion, and machine learning algorithms to develop tire intelligence systems. These capabilities are applied to tire-mounted sensors, TPMS, and telematics data to estimate tire wear, load, and road surface conditions. The objective is to enable next-generation mobility solutions, including Tire-as-a-Service, for OEMs, fleets, and the connected, autonomous, and electric vehicle domains.

Virtual Tire Development and R&D Digitalization

Investment is directed toward cloud infrastructure, MLOps, and physics-informed machine learning to create virtual tire development frameworks. By linking tire design with vehicle performance through predictive modeling and neural networks, the company aims to enhance product durability and engineering productivity. This includes the industrialization of algorithms and software productization to transition advanced development models into production-ready automotive systems.

Automated Inspection and Quality Assurance

The company is building computer vision, image processing, and multi-modal machine learning models for automated tire inspection and damage assessment. These technologies are applied to optical data analysis, including cut section analysis and shearography, to automate field treadwear assessments and identify anomalies. The goal is to improve measurement accuracy, quality standards, and predictive diagnostics in manufacturing and product development.

Manufacturing and Supply Chain Optimization

Investment is focused on machine learning, operations research, and Industrial IoT to optimize manufacturing operations and supply chain logistics. These capabilities are applied to production scheduling, inventory management, and manufacturing simulations to improve operational performance. Additionally, the company is deploying automated machine learning for demand planning to standardize 18-24 month forecasting cycles at the SKU level.

Enterprise AI and Autonomous Agents

The company is investing in agentic AI architectures, generative AI models, and virtual agents to automate business processes across manufacturing, supply chain, and customer engagement. This includes the integration of AI platforms for IT service management and the development of security frameworks to manage risks related to AI autonomy. The objective is to enhance enterprise decision-making, democratize data science through citizen-led initiatives, and scale digital solutions across the organization.

Risk Management and Business Intelligence

Investment is being made in predictive modeling and natural language processing for compliance risk assessments, ethics monitoring, and regulatory oversight. Furthermore, the company is applying deep learning and advanced analytical tools to commercial market forecasting and competitive intelligence. These efforts serve to improve risk management, contextualize driving behavior for fleet mission profiles, and drive data-driven business strategies.

AI hiring trend

The dataset contains 16988 observed postings. AI-core postings are 97; AI-adjacent postings are 292. Years with AI-related evidence: 2022: AI-core 13/647 (2.0%), AI-adjacent 26/647; 2023: AI-core 31/2345 (1.3%), AI-adjacent 73/2345; 2024: AI-core 20/4131 (0.5%), AI-adjacent 85/4131; 2025: AI-core 21/7446 (0.3%), AI-adjacent 85/7446; 2026: AI-core 12/2386 (0.5%), AI-adjacent 23/2386. AI-core capability mix by year: 2022: AI / ML modeling 13; 2023: AI / ML modeling 30; 2024: AI / ML modeling 13; 2025: AI / ML modeling 14; 2026: AI / ML modeling 7, LLM / GenAI apps 1, Agentic AI 2. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

AI hiring geography

Top hiring countries

Top countries for AI roles

AI intensity by country

AI role mix in top AI countries

AI / ML modeling
LLM / GenAI apps
Agentic AI

Largest overall posting countries: US 9632; IN 1191; RO 791; PH 657; LU 545; FR 420. Countries with AI-core postings and their denominators: US: 45/9632 (0.47%); LU: 22/545 (4.04%); IN: 16/1191 (1.34%); UNKNOWN: 5/323 (1.55%); RO: 4/791 (0.51%); CN: 3/52 (5.77%); DE: 2/224 (0.89%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

AI staffing and seniority

This page replaces skill lists with higher-level staffing information. Role archetypes: AI-related profile: 69; R&D design profile: 17; AI architecture / enterprise AI: 8; ML / data engineering: 3. AI capability families: AI / ML modeling: 77; Cloud Platforms: 10; Bi Analytics: 7; Agentic AI: 2; LLM / GenAI apps: 1. Business-area denominators: Customer Offerings 38/5636 (0.67%); Materials Research 23/448 (5.13%); It And Data 21/674 (3.12%); Supply Chain 7/1304 (0.54%); Corporate Functions 4/1718 (0.23%); Sales Marketing Customer 3/3254 (0.09%); Manufacturing Operations 1/3941 (0.03%). Seniority counts inside AI-core postings: Mid Level 56, Senior 15, Staff 14, Junior 9, C Level 3. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets

The matrix locates AI-core postings by capability family and business area. Capability-family counts: Ai MI Modeling 77; Cloud Platforms 10; Bi Analytics 7; Agentic AI Systems 2; Llm Genai Applications 1. Business-area counts: Customer Offerings 38; Materials Research 23; It And Data 21; Supply Chain 7; Corporate Functions 4; Sales Marketing Customer 3; Manufacturing Operations 1. Nonzero cells: Ai MI Modeling in Customer Offerings: 37; Ai MI Modeling in It And Data: 16; Ai MI Modeling in Materials Research: 15; Cloud Platforms in Materials Research: 8; Ai MI Modeling in Supply Chain: 7; Bi Analytics in Corporate Functions: 3; Bi Analytics in Sales Marketing Customer: 3; Agentic AI Systems in It And Data: 2; Cloud Platforms in It And Data: 2; Ai MI Modeling in Corporate Functions: 1; Ai MI Modeling in Manufacturing Operations: 1; Bi Analytics in Customer Offerings: 1; Llm Genai Applications in It And Data: 1. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
