

Macro AI Hiring Report - ITT

AI capabilities identified from investment signals

Dataset facts: 2,783 observed postings, 14 AI-core postings, and 36 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

Generative AI and Intelligent Automation. The company is investing in LLM workflows, RAG architectures, and AI agents to automate business operations and streamline processes across the value chain, from sales to manufacturing. These capabilities are applied to document data extraction and the creation of automated workflows to improve operational efficiency.

Manufacturing Intelligence and Quality Control. Investment is directed toward AI and machine learning for brakepads production. These technologies are implemented for real-time monitoring and quality control to improve manufacturing operations and ensure product standards.

Enterprise Data Platforms and Process Transformation. The company is building AI and machine learning capabilities within enterprise-wide data platforms to modernize and transform operations, engineering, sales, and finance functions. This investment serves to automate business processes, develop data-driven products, and transition the organization toward a data-driven operating model.

R&D and Digital Innovation. Investment in machine learning and data analysis tools is focused on R&D to support product development and internal innovation projects. These tools are used for data collection and analysis to accelerate the development of new digital solutions and internal tools.

AI hiring trend

The dataset contains 2783 observed postings. AI-core postings are 14; AI-adjacent postings are 36. Years with AI-related evidence: 2023: AI-core 0/230 (0.0%), AI-adjacent 3/230; 2024: AI-core 5/877 (0.6%), AI-adjacent 10/877; 2025: AI-core 8/1137 (0.7%), AI-adjacent 15/1137; 2026: AI-core 1/469 (0.2%), AI-adjacent 8/469. AI-core capability mix by year: 2024: AI / ML modeling 5; 2025: AI / ML modeling 6, LLM / GenAI apps 2; 2026: LLM / GenAI apps 1. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

AI hiring geography

Top hiring countries

Top countries for AI roles

AI intensity by country

AI role mix in top AI countries

Largest overall posting countries: US 1639; IT 216; MX 179; DE 120; GR 104; NL 97. Countries with AI-core postings and their denominators: GR: 7/104 (6.73%); IT: 5/216 (2.31%); US: 2/1639 (0.12%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

AI staffing and seniority

This page replaces skill lists with higher-level staffing information. Role archetypes: AI-related profile: 8; AI architecture / enterprise AI: 3; R&D design profile: 3. AI capability families: AI / ML modeling: 11; LLM / GenAI apps: 3. Business-area denominators: It And Data 9/209 (4.31%); Materials Research 3/249 (1.20%); Manufacturing Operations 2/927 (0.22%). Seniority counts inside AI-core postings: Mid Level 5, Junior 5, Senior 4. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets

The matrix locates AI-core postings by capability family and business area. Capability-family counts: Ai MI Modeling 11; Llm Genai Applications 3. Business-area counts: It And Data 9; Materials Research 3; Manufacturing Operations 2. Nonzero cells: Ai MI Modeling in It And Data: 6; Ai MI Modeling in Materials Research: 3; Llm Genai Applications in It And Data: 3; Ai MI Modeling in Manufacturing Operations: 2. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
