

Macro AI Hiring Report - Michelin

AI capabilities identified from investment signals

Dataset facts: 7,328 observed postings, 157 AI-core postings, and 101 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

Industrial Process Optimization and Manufacturing Automation

The company is investing in deep learning, Bayesian optimization, and agentic AI to enhance manufacturing process control and equipment health monitoring. These technologies are applied to industrial vision for measurement accuracy, defect detection, and quality inspection, as well as 1D signal processing for real-time equipment monitoring. The objective is to improve production efficiency, reduce operational costs, and enable advanced automation through self-learning robotics and pick-and-place systems.

Material Science and Product R&D Innovation

Investment is directed toward machine learning, graph neural networks, and physically informed AI to accelerate material design and characterization. These capabilities are used for predicting material properties, thermodynamic behavior, and polymer biodegradability, specifically targeting tire performance optimization and nanoparticle interaction modeling. The goal is to reduce experimental costs, accelerate R&D insights, and ensure physics compliance in simulations.

Predictive Maintenance and Product Performance Analytics

The company is building predictive modeling and hybrid AI-physics capabilities to monitor and enhance product durability, particularly for tires and industrial equipment. Applications include real-time failure detection, tire end-of-life prediction, and proactive maintenance planning for mining and manufacturing operations. These investments serve to reduce equipment downtime, optimize asset utilization, and improve safety and sustainability.

Customer Engagement and Conversational AI

There is a significant focus on Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and generative AI to develop customer-facing NLP products. These technologies power chatbots and conversational interfaces designed to enhance user engagement, improve digital service offerings, and automate customer-facing interactions across various digital channels.

Supply Chain, Logistics, and Fleet Management

AI and machine learning are being applied to demand forecasting, procurement efficiency, and fleet data analytics. Specific applications include agentic AI for connected fleet management, road infrastructure monitoring, and mobility risk prediction. The objective is to optimize supply chain planning, improve road safety, and enhance the operational efficiency of logistics and fleet services.

Marketing Intelligence and Consumer Insights

The company is investing in predictive modeling and generative AI for marketing automation, customer segmentation, and churn modeling. These tools are used to analyze consumer behavior, optimize dynamic pricing, and drive strategic product portfolio decisions. The primary goal is to maximize long-term customer value, reduce churn, and increase revenue margins through data-driven marketing strategies.

Enterprise Operations and Business Intelligence

Investment in LLMs and machine learning is being channeled into internal business process automation, including internal audits, finance, and personnel data analytics. Applications include the generation of functional specifications from code and automated risk detection. These capabilities aim to drive business transformation, enhance operational excellence, and support data-driven decision-making across the enterprise.

AI Infrastructure and MLOps

To support its AI initiatives, the company is investing in MLOps and scalable data infrastructure, particularly on the Azure cloud platform. This includes building end-to-end ML pipelines, AI evaluation frameworks for LLMs, and optimization for high-throughput, low-latency use cases. The objective is to ensure the reliable, secure, and scalable deployment of AI models into production environments.

IT Operations and Cybersecurity

The company is applying generative AI and machine learning to IT operations (GenAI for SRE) and cyber threat detection. These investments are focused on improving system reliability, enhancing real-time response capabilities to security threats, and reducing the operational costs of maintaining IT infrastructure.

AI hiring trend

No AI roles by month

AI-related roles by month

AI roles share by year

AI roles mix by year

The dataset contains 7328 observed postings. AI-core postings are 157; AI-adjacent postings are 101. Years with AI-related evidence: 2022: AI-core 9/136 (6.6%), AI-adjacent 2/136; 2023: AI-core 30/1411 (2.1%), AI-adjacent 15/1411; 2024: AI-core 28/1943 (1.4%), AI-adjacent 25/1943; 2025: AI-core 69/2728 (2.5%), AI-adjacent 48/2728; 2026: AI-core 21/1101 (1.9%), AI-adjacent 11/1101. AI-core capability mix by year: 2022: AI / ML modeling 9; 2023: AI / ML modeling 30; 2024: AI / ML modeling 19, LLM / GenAI apps 9; 2025: AI / ML modeling 60, LLM / GenAI apps 5, Agentic AI 4; 2026: AI / ML modeling 14, LLM / GenAI apps 4, Agentic AI 2. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

AI hiring geography

Top hiring countries

Top countries for AI roles

AI intensity by country

AI role mix in top AI countries

Largest overall posting countries: FR 2099; US 1687; IN 730; BR 519; RO 426; CA 421. Countries with AI-core postings and their denominators: FR: 82/2099 (3.91%); IN: 48/730 (6.58%); BR: 12/519 (2.31%); US: 11/1687 (0.65%); CA: 4/421 (0.95%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

AI staffing and seniority

This page replaces skill lists with higher-level staffing information. Role archetypes: AI-related profile: 93; R&D design profile: 30; AI architecture / enterprise AI: 18; Manufacturing data science: 12; ML / data engineering: 4. AI capability families: AI / ML modeling: 132; LLM / GenAI apps: 18; Agentic AI: 6; Data Engineering: 1. Business-area denominators: It And Data 51/886 (5.76%); Manufacturing Operations 33/2908 (1.13%); Materials Research 30/585 (5.13%); Customer Offerings 30/747 (4.02%); Supply Chain 6/404 (1.49%); Sales Marketing Customer 6/688 (0.87%); Corporate Functions 1/994 (0.10%). Seniority counts inside AI-core postings: Mid Level 70, Senior 43, Junior 41, Staff 3. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets

The matrix locates AI-core postings by capability family and business area. Capability-family counts: AI ML Modeling 132; Llm Genai Applications 18; Agentic AI Systems 6; Data Engineering 1. Business-area counts: It And Data 51; Manufacturing Operations 33; Materials Research 30; Customer Offerings 30; Supply Chain 6; Sales Marketing Customer 6; Corporate Functions 1. Nonzero cells: AI ML Modeling in It And Data: 39; AI ML Modeling in Manufacturing Operations: 31; AI ML Modeling in Materials Research: 30; AI ML Modeling in Customer Offerings: 19; Llm Genai Applications in Customer Offerings: 9; Llm Genai Applications in It And Data: 8; AI ML Modeling in Sales Marketing Customer: 6; AI ML Modeling in Supply Chain: 6; Agentic AI Systems in It And Data: 3; Agentic AI Systems in Customer Offerings: 2; Agentic AI Systems in Manufacturing Operations: 1; AI ML Modeling in Corporate Functions: 1; Data Engineering in It And Data: 1; Llm Genai Applications in Manufacturing Operations: 1. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
