

Macro AI Hiring Report - Gestamp

AI capabilities identified from investment signals

Dataset facts: 2,685 observed postings, 3 AI-core postings, and 10 AI-adjacent postings. The sections below summarize the investment_signal field for AI-core postings only. Counts are observed postings in the dataset, not confirmed hires, budget, capex, or R&D expense.

Multi-agent orchestration and enterprise integration. The company is developing multi-agent orchestration and Generative AI pipelines within corporate IT to build intelligent agents. These systems are designed to integrate with enterprise platforms to support and scale global operations.

Cloud-native workflow automation. Investment is directed toward Generative AI and Azure Semantic Kernel for backend services. This capability is applied to cloud-native applications to accelerate workflow automation and enhance backend service delivery.

AI hiring trend

The dataset contains 2685 observed postings. AI-core postings are 3; AI-adjacent postings are 10. Years with AI-related evidence: 2024: AI-core 0/823 (0.0%), AI-adjacent 7/823; 2025: AI-core 1/1039 (0.1%), AI-adjacent 2/1039; 2026: AI-core 2/365 (0.5%), AI-adjacent 1/365. AI-core capability mix by year: 2025: LLM / GenAI apps 1; 2026: Agentic AI 2. Read this page as posting activity over time, not as budget, confirmed hires, or employee share.

AI hiring geography

Top hiring countries

Top countries for AI roles

AI intensity by country

AI role mix in top AI countries

Largest overall posting countries: MX 877; US 688; ES 379; BR 224; IN 125; FR 117. Countries with AI-core postings and their denominators: ES: 3/379 (0.79%). Use the denominators when reading country percentages. A smaller country posting base can produce a higher percentage from a small number of AI-core postings.

AI staffing and seniority

This page replaces skill lists with higher-level staffing information. Role archetypes: AI-related profile: 2; AI architecture / enterprise AI: 1. AI capability families: Agentic AI: 2; LLM / GenAI apps: 1. Business-area denominators: It And Data 3/41 (7.32%). Seniority counts inside AI-core postings: Mid Level 3. Use this page to understand the type of profiles being staffed and where they sit in the organization, not to infer budget or employee share.

AI breadth across capability pockets

The matrix locates AI-core postings by capability family and business area. Capability-family counts: Agentic Ai Systems 2; Llm Genai Applications 1. Business-area counts: It And Data 3. Nonzero cells: Agentic Ai Systems in It And Data: 2; Llm Genai Applications in It And Data: 1. Read the bubbles as a map of where the observed AI-core postings sit, not as project size, budget, or strategic priority.

Appendix: brief label guide

Score 0 means no explicit AI-role signal. A posting can still be technical and remain score 0. Score 1 means AI-adjacent: AI is mentioned, but it is not the core responsibility of the role. Score 2, called AI-core in this report, means AI, ML, LLMs, GenAI, MLOps, or related AI capability is explicit and central to the role. Primary category describes the capability family, such as AI / ML modeling, LLM / GenAI applications, agentic AI systems, industrial automation, enterprise systems, or materials-science R&D. Business area describes the organizational context, such as IT and data, manufacturing operations, materials research, supply chain, customer offerings, sales and marketing, or corporate functions. Counts are observed postings in the enriched dataset. They are not confirmed hires, employee counts, budgets, capex, or R&D expense.
